Every answer, beautifully collected

Indition Forms turns questions into conversions. Design branded forms visually, publish them anywhere — your Indition pages or any website you own — and let every submission trigger the follow-up automatically. No code, no plugins, no stitching together three tools to do one job.

Build without limits

Start from a blank form or clone a proven one. Drag more than forty field types onto a canvas that behaves the way design tools should: rows and columns, themes that restyle everything in one click, and a style panel for the details. What you see in the designer is exactly what your visitors get.

- **Real-world fields** — addresses that validate, phone numbers that know their country, file uploads, signatures, payments, date ranges.
- **Smart fields** — calculations that update as visitors type, repeating sections for line items, options that load live from your systems.
- **Your brand, not ours** — themes, typography and page templates make the form look like your site because it is your site.

Long forms that finish

Applications, registrations, intake packets — the forms that matter are the forms people abandon. Indition Forms is built to carry visitors through:

- **Multi-step journeys** with a progress bar, so a fifty-question form feels like five small ones.
- **Branching** that skips what does not apply, and **stop points** that pause an application for review before it continues.
- **Show/hide logic** so every visitor sees only their questions.
- **Save & resume** — visitors pick up where they left off from an emailed link.
- **Partial submissions** — even the ones who stop halfway become follow-up opportunities instead of mysteries.

Publish everywhere, securely

Every form gets a hosted page on your domain the moment you publish. Need it on your marketing site, your store, a partner page? One script tag embeds the form in a security-sandboxed frame that sizes itself perfectly — through every step and every conditional reveal — and only renders on domains you have approved. Your visitors' answers stay between them and you: the embedding page cannot read a keystroke.

Forms that run your process

Some forms are not just collected — they are *worked*. Indition Forms builds the workflow in:

- **Stop points** pause an application at the step you choose and queue it for your team: review the answers, edit or request corrections, email the applicant, and release it onward when it is ready. Approvals, verifications and underwriting live here.
- **API calls** connect the form to your systems mid-flight — verify a membership number before step two, price a quote from your rate engine, push the finished application into your CRM — with every call logged and re-runnable.
- **Branching** routes each applicant down the path that fits their answers, and a preview step lets them confirm everything before it counts.

Built for real scenarios

Scenario	The build
Loan or membership application	Multi-step with branching, an identity-verification API at the boundary, a stop point for underwriting review, save & resume for the applicant.
Quote calculator	Calculated fields for live pricing, an API call into the rate engine, payment fields to close on the spot.
Event or class registration	Option constraints that retire full sessions, a confirmation email, an export for the door list.
Support intake	Conditional logic that asks only the relevant questions, file uploads for evidence, an API push into ticketing.

From submission to action

A form that just collects is half a product. Every Indition Forms submission runs a pipeline you compose: thank-you messages and redirects, instant notifications to your team, confirmations to the respondent, Google Analytics and Ads conversion events, and API calls into the systems that should hear about it. Submissions land in a workspace with search, exports, and one-click PDFs — single or in bulk.

Why teams choose Indition Forms

If you are...	Indition Forms gives you
Marketing	Branded lead forms live on any page in minutes, with pre-filled campaign links and conversion tracking built in.
Operations	Multi-step intake with logic, review stop points, exports and PDF records — without a developer in the loop.
IT	A sandboxed, domain-locked embed, platform-side validation and spam protection, and one vendor for the whole pipeline.
Growing	Plans that scale from a contact form to payment-taking, API-connected application suites.

Part of the Indition platform

Forms is not an island: it shares the platform's pages, email, tracking, storage and integrations. The form you build today drops into the site you already run, mails through the delivery you already trust, and reports next to everything else. One platform, one login, every answer where it belongs.

See it in five minutes: create a form, click *Add All Element Fields*, apply a theme, publish, and paste the embed on any page you own. That is the whole workflow.
