

INDITION CONTENT MANAGEMENT

AI Site Designer

Release Notes — introducing the AI Site Designer: your next website,
drafted by AI from the sites you love, and built inside Indition.

POWERED BY AI

Version V1.0 · September 2026

© 2026 Indition Corp. All rights reserved. Indition™ and the Indition logo are trademarks of Indition Corp. All other product names, logos, and brands are the property of their respective owners.

New in the Indition CMS: the AI Site Designer. Show it a screenshot, up to ten websites you admire, or your own live pages, and it drafts a complete design for your business — look, layouts and pages built from your own widgets. Refine it step by step, then build it as drafts in one click, without changing your live site until you publish.

Wherever you see this mark, AI does the work for you. Each AI feature has its own switch.

Highlights

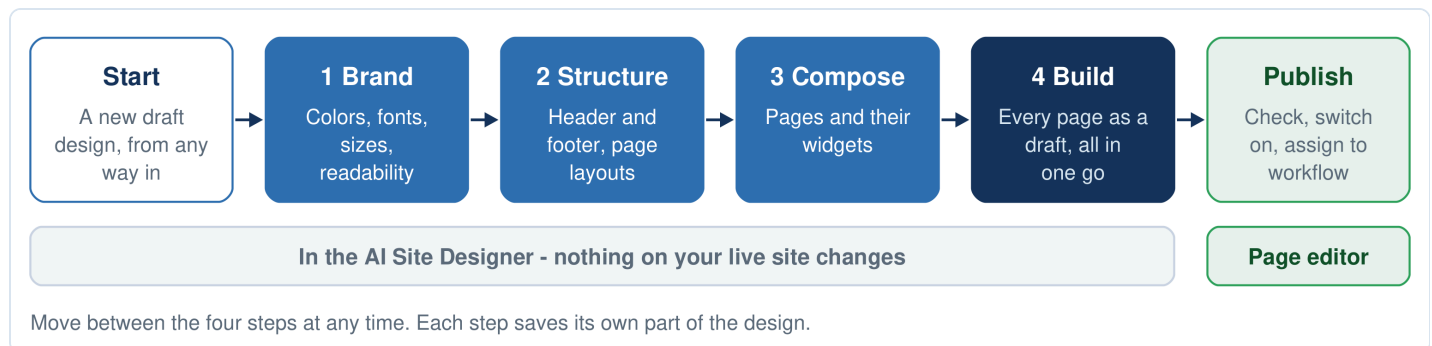

NEW IN THE CMS

Design it here. Build it as drafts. Publish when you are ready.

A design is made of real templates and real widgets, so there is no hand-over from a picture to someone who rebuilds it. Building writes exactly what you designed — as drafts, switched off and out of every workflow — and a built design stays as the record of what it created.

What's new

The four steps

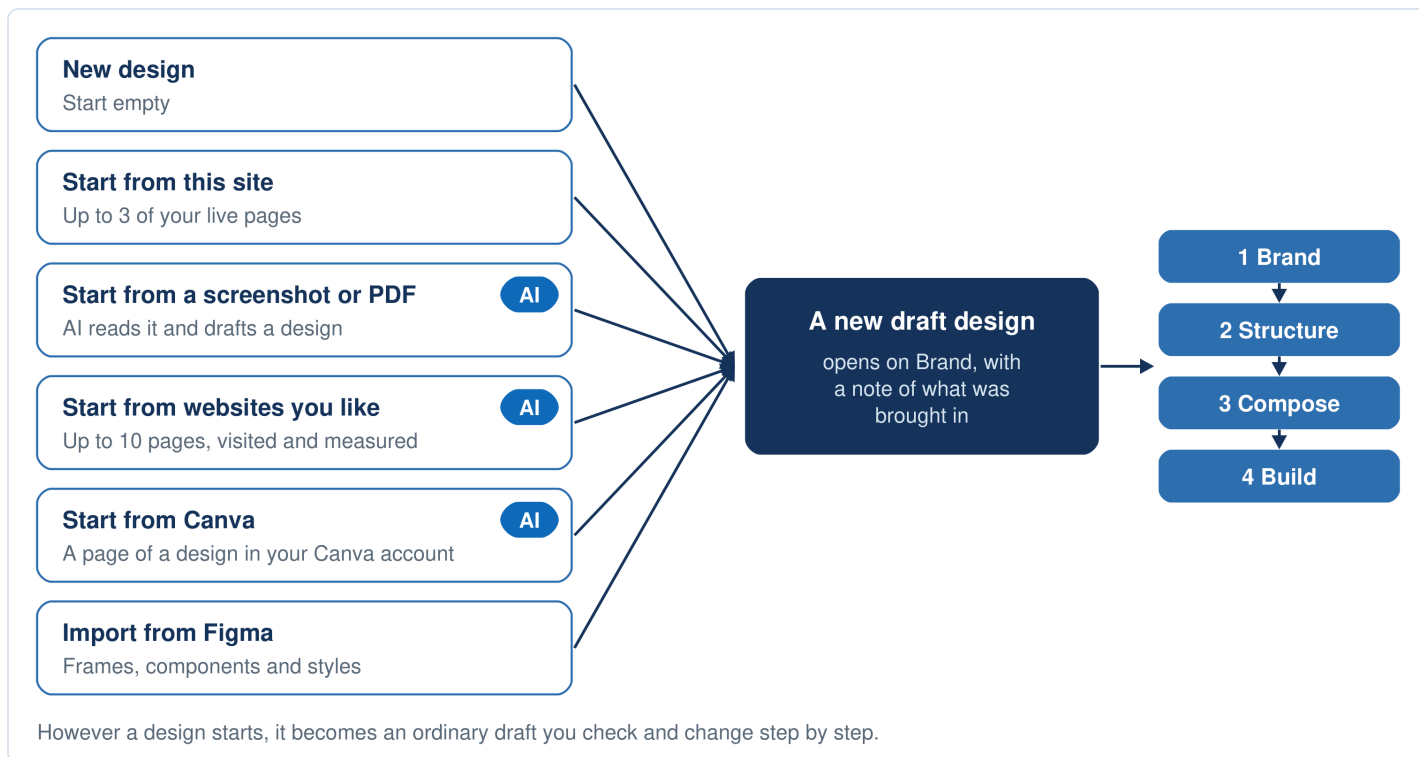

The path of every design. Start it any way you like, work through the four steps, then build. Nothing on your live site changes until you publish each built page in the page editor.

- **Brand** — colors, fonts, text size, line spacing, content width, spacing and corners, with a live preview at computer, tablet and phone sizes, a readability check on nine text pairs, and **Use my styling presets** to start from the styles already on your site.
- **Structure** — a canvas of the page shell, the header and footer, and the page layouts on a 12-column grid. Five kinds of layout, reuse of similar templates you already have, and **On phones** to hide or move an area on phones.

- **Compose** — ordinary pages and store pages (the product page and gift card page), widgets placed in three steps with your saved styles first, the header and footer filled once for every page, and a list of **things no widget can do yet** instead of workarounds.
- **Build** — every problem listed with the step that fixes it, a clear list of what will be created, and one **Build drafts** that creates everything in one go or nothing at all.

Ways to start

Six ways in, one way through. Every way to start ends in an ordinary draft that opens on Brand.

- **New design** — start empty.
- **Start from this site** — begin a redesign from up to three live pages: your brand, the templates they sit in and their widgets, built as new drafts beside the live pages. No AI.
- 🗂️ **Start from a screenshot or PDF** — AI drafts a design from a picture or PDF of a site you like.
- 🗂️ **Start from Canva** — choose a design and page from your Canva account; AI drafts a design from it.
- 🗂️ **Start from websites you like** — give up to ten page addresses and what to take from each; the pages are visited, pictured and measured, and AI drafts one design from them.
- **Import from Figma** — frames become layouts and pages, components become widgets, and styles become your brand. No AI.

AI help while you design

- 🗂️ **Describe a page layout** — draft a layout's areas from a sentence, in Structure.
- 🗂️ **Add a page from a description** — draft a whole page, with its layout, address and widgets, in Compose.

-  **Fill with AI** — suggest widgets for one area.
-  **Rewrite with AI** — rewrite a placed widget's words and settings the way you ask, straight into its form.

Keeping templates tidy

- **Unused templates** lists the templates the AI Site Designer made that no page uses, switches unused page layouts off, and deletes a template only when nothing has ever used it. A card on the design list appears when templates have been unused for 90 days.

Safe by design

- Nothing on your live site changes until you publish the built pages yourself.
- A built design cannot be changed or built again; duplicate it to keep working.
- AI drafts are always shown first and only kept when you save. Their HTML is made safe, and text in a reference that tries to instruct the AI is never followed.
- Start from websites can only reach public websites, never your own network, and runs on a server of its own.

Setting it up

- Apply the outstanding CMS patches, then install the **Cms / AI Site Designer** module (Admin > Modules). Everyone who could use it keeps their access.
- Give the **AI Site Designer** permission to the roles that design (CMS admins have it already), and **Use the AI Assistant** to those who should use AI.
- Turn on the AI features you want in **Cms > AI Assistant**, under **Where staff can use AI**.
- For Start from websites, set up the page-picturing service in **AI Site Designer > Settings**. For Import from Figma, connect a Figma account. For Start from Canva, save the Canva integration and connect a Canva account in **AI Site Designer > Settings**.

See the *Setup Guide* for each step.

Good to know

- Only product and gift card pages are built as store pages; other store pages are left out of a build and the Build step says why.
- Web fonts chosen in the brand load from Google Fonts on built pages.
- Most existing live pages set their colors widget by widget, so they do not change with a design's brand; pages built from the design do.
