

INDITION COMMERCE

Merchant Mall — Your Vendors' Catalogs, One Click Away

You know the drill: the vendor emails a spreadsheet, and somebody loses a weekend turning it into products. Merchant Mall retires the drill.

Browse like shopping, not data entry

Open Merchant Mall in your admin and your vendors' catalogs are just *there* — thousands of products with names, descriptions, SKUs, pricing, options, and images, kept current centrally. Find what you want to carry and click **Add to My Catalog**. That's the entire workflow. Want everything a vendor makes? **Add ALL** queues the whole catalog and builds it for you in the background.

Complete products, respectfully placed

Added products arrive whole — every SKU, every price level, variant options like Color and Size, categories, images. And they arrive politely: categories file into *your* tree, attributes match *your* existing ones by name, and nothing you've customized is ever overwritten. Your store stays your store.

Fresh without surprises

Prices and stock update themselves — unless you've locked a price, because your lock always wins. Content changes, discontinued products, and a vendor's new releases line up in your **Catalog Updates** inbox with clear before-and-after views, waiting for your yes. Automation where it's safe, your judgment where it matters.

Zero setup, genuinely

Merchant Mall installs from your App Store in one click and connects itself. No API keys, no configuration screens, no IT project. Uninstall any time — the products you've added remain yours.

Merchant Mall — the vendor catalog network for Indition Commerce stores.
