Product-Type Content Fields Release Notes

Release summary for product-type-specific content tab configuration and visibility controls

Module	Shop
Feature	Product-Type Content Field Configuration
Primary Route	/admin/Shop/admin/contentField/admin
Generated	April 25, 2026
Document Type	Release Notes

This documentation covers the April 2026 update that scopes content-field settings by product type and adds per-field visibility control.

Release Summary

• Manage Content Fields is now product-type aware. Admins can configure labels, editor types, and visibility differently for Product, Education, Gift Cards, and other product types.

• The feature remains available from the central Shop Admin menu and includes a Product Type selector on the configuration screen.

New Capabilities

• Store content field settings by product_type_id.

• Show or hide each managed product or sub-product content field per product type.

• Filter each content-field table by Field, Tab Label, Content Type, and Show/Hide Field.

• Keep existing labels and editor types by copying the previous global configuration to each product type during migration.

Behavior Notes

• Show/Hide defaults to shown for all existing and newly seeded content fields.

• Hidden fields are not rendered on product or sub-product edit screens for the selected product type.

• The Product Type dropdown replaces separate module-specific menu entries, keeping configuration centralized under Shop Admin.

Deployment Notes

• Run Patch5_15_14_AddProductTypeToShopContentField.

• Run Patch5_15_14_AddShowFieldToShopContentField.

• Clear caches if the admin page still shows the old layout or cached menu metadata.

Affected Areas

• Shop Admin Manage Content Fields screen.

• Product update and create forms.

• Sub-product update and create forms.

• Shop content field configuration model and migrations.

Compatibility

Area	Expected Result
Existing content values	No product or sub-product content value migration is required.
Existing content settings	Copied to every product type by migration.
Default visibility	All fields remain shown until explicitly hidden.
Module navigation	No Education or GiftCards settings menu item is needed.

Generated for the Shop module documentation set. Final files are stored in core/modules/Shop/docs.
